<b>Activity</b>	<p><b><u>START SOTF Team #1Activity:</u></b>  SOTF # 1 conducted oversight of Enbridge's Team A poling re-assessment activities. Team A members Mike Neal Poling leader, Ted Reckers GPS/Leica operator.</p> <p>Team A conducted poling sediment agitation at several focus areas:  10.17T 2 points recorded, 1 point with heavy sheen, 1 with none. Sediment temperature did not meet the minimum required; sheen became heavier due to jet boat traffic.  10.21T 1 point collected light sheen. Temperature above 60 degrees.  10.20S 1 point recorded at approximately 10ft. from original location; coordinates pointed to a mudflat. Temperature at 58 degrees in the sediment, 57 at water level.  10.36T 1point recorded with no visible contamination. Temperatures even at 59 degrees.  10.40N 11 points recorded, 1 with heavy sheen, 2 moderates, 5 lights and 3 with no visible contamination. Temperature in the sediment 60 degrees and 58 degrees at water level.  10.44T 3 points recorded, 1 point with light sheen, 2 points with no visible contamination. Temperature in the sediment at 59 degrees and 58 degrees at water level.  10.5N 11 points recorded; 2 points with moderate sheen, 1 point with light sheen and 8 points no visible contamination including delineation points. Temperature in the sediment at 59 degrees in some areas, 61 in some to the points and 58 degrees at water level.  10.65TB 3 points recorded, 1 point with heavy sheen, 2 with light sheen. Temperature in sediment 59 degrees and 58 at water level.  10.80S 3 points recorded, 1 with light sheen and 2 with no visible contamination. Temperature in</p>			

	<p>the sediment at 62 degrees and 59 at water level.</p> <p>10.80N 4 points recorded, 1 with moderate sheen, 1 with light sheen and 2 with no visible contamination. Temperature in the sediment ranged from 58-61 degrees and 58 at water level.</p> <p>10.95N 4 points collected, 1 with light sheen and 3 with no visible contamination. Temperature in the sediment and water level at 58 degrees.</p> <p>10.97T 1 point collected with light sheen, temperatures in the sediment and water level at 58 degrees.</p> <p>11.00N 1 point collected with light sheen, temperature in the sediment at 60 degrees and 58 at water level.</p> <p>Areas poled today consisted mostly of sand and gravel with relatively fast flow; however areas with the most visible oil sheen and globules had soft sediment accumulation.</p>
<b>Health and Safety Issues</b>	None
<b>Comments</b>	None
